

# PÖMA – Grader AG 225

For tractors with 3-point hitch cat. II and III, 120 – 250 HP

## Completely hydraulically controlled

For road building and maintenance, grading, landscaping, backfilling and ripping. The PÖMA – Grader AG 225 is a most modern, very strongly built piece of equipment for all kinds of grading jobs for contractors, forestry and communities.

Adjustments are made with electro hydraulic-valves. Joy-stick-levers inside the tractor cabin help to handle the unit highly comfortable. The offsetting the grader to the right or left prevents the tractor being taken out of the track and also allows working close up to the walls and ditches. The support wheels set far to the rear always run in the track of the grader blade.

Rippers and side-blades are useful for road-maintenance work.

For turning and transportation the grader is lifted through the tractor 3-point hitch.

<b>Specifications:</b>	Working width	2250 mm or 2700 mm
	Blade height	540 mm
	Maximum offset, r.+ l.	840 mm
	Tilt of blade	18°
	Total length	3700 mm
	Weight	2000 kg
